MOD-U-DOCK MODULAR BOAT DOCKS

Mod-U-Dock features innovative modular dock systems in both stationary and floating dock configurations. Designed to have aesthetic appeal, these rugged, top quality modular docks are great for both residential and commercial use. Both pre-set designs and flexible design building options are available, as well as matching dock accessories.

Use of marine-grade PVC sets Mod-U-Dock stationary and floating docks apart from other modular boat dock systems. Rugged and maintenance-free, Mod-U-Dock boat docks and piers are quiet to walk on and remain cool even in intense heat.

Mod-U-Dock modular docks are also easy to install. Installation by section means there is no complicated assembly. Hardware is limited to [four types of brackets](#): outside corner, straight, and inside corner.

Dock benches, ladders, boat slips (catwalks), dock boxes, solar lights, and shore attachments or ramps are also available.

Flexible dock design and dock building options maximize configuration possibilities. Create and build the dock system that best suits your particular needs or imagination. Great for both private, residential use as well as for heavy traffic or commercial installations.

Mod-U-Dock products and dealer opportunities are available nationwide and in Canada.
